Widespread collaboration—both internally among employees and externally with partners, suppliers, and other vendors—is essential to increasing productivity, efficiency, and profitability.

The 3 C's Driving Data Sharing Today

New collaboration technologies emerge daily—many of which are outside IT's control.

Rapid adoption of cloud services results in more data beyond the corporate perimeter.

The work-from-home trend—accelerated by COVID-19 pandemic—pushes data sharing to unprecedented levels.

Greater Sharing = Greater Exposure = Greater Risk

\$3.9 million

average cost of a data breach for 2020.¹

of data breaches in the Tech industry are due to human error, both internally and externally.²

of security professionals agree that data loss and leakage is a top cloud security concern.³

of Tech companies noted open platforms, APIs, and cloud usage trends affect their cybersecurity strategy.⁴

of companies had over 1,000 sensitive files open to every employee.⁵

of enterprise workloads have moved to the cloud in 2020.⁶

Why Traditional Data Protection Solutions Fall Short

Having "fences" that restrict the flow of sensitive data and solutions that are cumbersome to implement and maintain is not enough.

Visibility, control, and protection also need to extend **"beyond the fence"** to account for the myriad business-driven use cases that require sensitive data to be shared, both internally and externally.

What Makes Vera Different

Complete data protection

that extends beyond the perimeter of your firm and the time of initial sharing/distribution.

Ease of use

that includes the option of viewing and editing via a Vera HTML wrapper, or inline for native applications with the Vera client.

Comprehensive coverage

with no limitations on devices, file types, data stores, collaboration tools, or applications.

SECURE

Apply AES 256-bit encryption and granular access policies that travel with your data files regardless of how and where they're shared.

TRACK

Understand exactly who is accessing sensitive data inside and outside of your organization, to maintain visibility/control and thereby minimize the potential for leaks of pre-release content and other IP.

AUDIT

Understand exactly who is accessing sensitive data inside and outside of your organization, to maintain visibility/control and thereby minimize the potential for leaks of pre-release content and other IP.

REVOKE

Withdraw access to sensitive files any time after they've been shared, regardless of where and with whom the files now reside.
