DATASHEET (Core Security)

Identity Governance Connectors

Core Security offers hundreds of powerful standard and custom software connectors to organizations across every sector for most leading operating and network systems, platforms, middleware, and applications. This ensures identity and access management policies are consistently enforced and enables you to easily control access all in one place.

Our standard connectors leverage vendor-provided integration methods, so any customer who licenses these connectors can immediately use them out-of-the-box without special configuration for their environment. We also offer connectors that use custom-built integrations unique to a customer's requirements, ensuring specific features and requests are supported. Core Security also offers a Rapid Development Kit that enables you to quickly develop your own connectors for platforms or applications.
