Data Security Posture Management

Discover | Classify | Protect

How are you identifying sensitive data today, especially in shadow apps?

What's the risk if an attacker finds it before you do?

75%

of organizations experienced a SaaS-related breach in the past 12 months

- ITPro survey

87%

of enterprises find their current data discovery and classification solutions lacking

- Cybersecurity Insiders

Fortra DSPM helps organizations **discover**, **classify**, and **protect** sensitive data across cloud environments.

We give security teams visibility into where data is stored, how it's being accessed, and where it may be at risk so you can proactively reduce exposure and maintain control.

Discover

There's a sensitive payroll file open to the internet.

Want to fix that?

Classify

This file has sensitive information.

Shouldn't it be protected?

Protect

Source code shouldn't beshared to GenAI tools.

Want to set a DLP policy?

Discover
Shine a light on all your data, especially data in the shadows.

Data lives across clouds, SaaS apps, and backups, often invisible to security teams.

You can't secure what you can't see, so Discovery is the foundation for every data security decision. We bring visibility and control to the cloud apps and platforms your team relies on every day, like Google Drive, AWS, and Microsoft Azure.

DSPM helps you pinpoint where sensitive data lives, identify misconfigurations or risky access, and take action to secure it - all without disrupting the way your business works.

DATA EXPOSURE

Sharing Types

4
Sharing Types

● Internal	75
● Public	36
● External	31
● Org-Wide	11

DISCOVERY OVERVIEW

|	
Files scanned	47.9K
Files with sensitive data	24.9K
Files shared externally	67
Total data volume	88.74 GB
Data volume scanned	12.33 GB
Applications with sensitive data	8

Classify

Know what's critical, regulated, or risky.
Know what matters.

Not all data is created equal. Our classification goes beyond labels, automatically identifying what's sensitive, regulated, or business-critical, and understanding its context. This lets you prioritize risks, meet compliance requirements, and avoid wasting time on low-value data.

Classification also directs downstream tools such as DLP.

+ DEPARTMENT
+ DIVISION
+ RETENTION DATE
+ COUNTRY
+ CUSTOM ADDITIONS

HIPAA
Billing data cannot be shared with IT, nursing, doctors, operations.

SEC
Banking cannot share with Brokerage within the same organization.

GDPR
DLP system uses country of origin when sharing to block data originated within EU destined for restricted geos.

Legal
Retention reports could be generated to clean data which may be a liability and consume paid storage.

All classification data used to feed downstream systems such as DLP and data governance
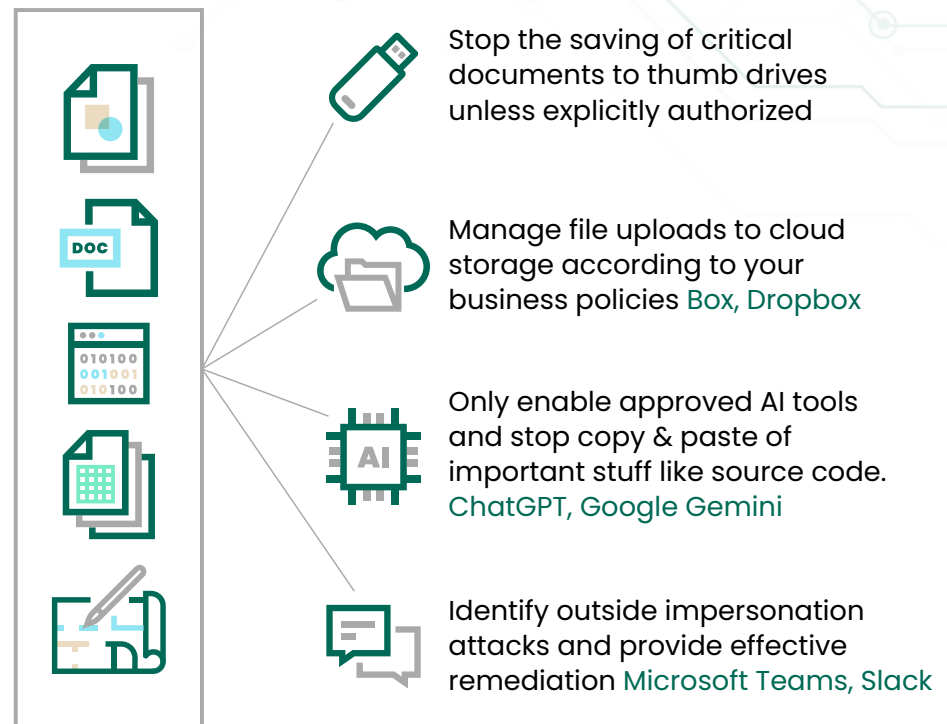

Protect
Guard what matters, wherever it goes, from endpoint to cloud.

Once you know where your sensitive data is and what it is, you can protect it with precision. Many vendors offer isolated solutions.

Fortra's advantage is delivering a comprehensive, integrated defensive security portfolio that all works together, reducing operational friction for security teams.

We add data loss prevention (DLP) to add data protection policies based on classification to ensure your data stays safe from endpoint to cloud.

Stop the saving of critical documents to thumb drives unless explicitly authorized

Manage file uploads to cloud storage according to your business policies Box, Dropbox

Only enable approved AI tools and stop copy & paste of important stuff like source code. ChatGPT, Google Gemini

Identify outside impersonation attacks and provide effective remediation Microsoft Teams, Slack

ABOUT FORTRA

Fortra provides advanced offensive and defensive security solutions
that deliver comprehensive protection across the cyber kill chain.
With complete visibility across the attack chain, access to threat
intelligence spanning the globe, and flexible solution delivery, Fortra
customers can anticipate criminal behavior and strengthen their
defenses in real time. Break the chain at fortra.com.
