

DATASHEET (DATA CLASSIFICATION)

Fortra's DCS Policy Manager, On-Premises Product

PRODUCT SUMMARY

BENEFITS

Fortra's Data Classification Suite (DCS) provides the essential classification tools to clearly inform both your people and your policies on what information should be secured and how to handle it by embedding metadata attributes into email, documents, and files at every stage of the content lifecycle. DCS can also automatically add visual markings to help organizations meet compliance and legal requirements.

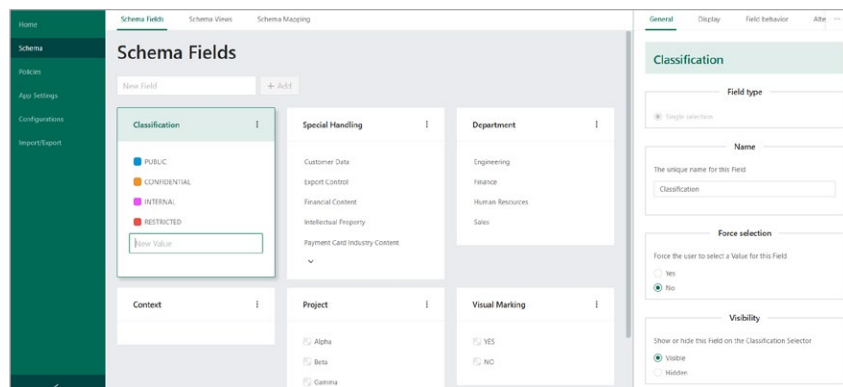

Policy Manager is part of Fortra's Data Classification solution; it is available as both an on-premises product and a cloud product.

Take control of your data security policies with Fortra's Policy Manager

Designed for organizations that require a secure, self-hosted environment, the on-premises version of Fortra's Policy Manager offers a robust, user-friendly experience that enhances your ability to manage and enforce data protection policies efficiently. Whether your infrastructure is on-premises or in a private cloud, Policy Manager ensures you can stay in control of your sensitive data, no matter where it resides.

User-Friendly Admin Experience

The admin interface is modern, intuitive, and designed for ease of use. Featuring drag-and-drop functionality and enhanced navigation, managing your data protection policies has never been easier. Admins can quickly build and modify policies with minimal effort using pre-built templates, speeding up deployment and reducing time to value.

Support for Private Clouds and Secure Infrastructure

Fortra's Policy Manager is designed to support customers utilizing private clouds, including those in government sectors. With a focus on secure environments, it also caters to organizations that prefer to use in-country cloud infrastructure.

Enhanced Endpoint Features

Tabs, filtered fields, and customizable select dialog interfaces allow admins to quickly configure settings and enforce security policies across various devices.

Pre-Built Templates for Faster Deployment

To help organizations get up and running quickly, Policy Manager offers a range of customizable templates. These templates cover common policy configurations, reducing the time needed to set up and implement data protection policies, while allowing for flexibility to meet specific organizational needs.

Why Choose Fortra's Policy Manager?

- **Flexible Hosting Options:** Choose the deployment method that best suits your security and compliance requirements, whether it's on-premises or in a private cloud.
- **Designed for All Industries:** Policy Manager is suitable for all Data Classification customers, especially US, UK, AUS, CAN, and NZ government, defense, and intel organizations, as well as EMEA and Middle East customers with strict data sovereignty needs.

Additional new capabilities available through Fortra's Policy Manager

A select dialog with DCS shows a tabbed view with schema fields that can be filtered, and a logo (Fortra Data Classification) that can be amended to the customer's choice.

A screenshot shows a typical email send policy. Rules and Actions can be dragged across from their collections to a rule tray.
