FORTRA

Web Application Scanning
Audit the Security of Your Web Applications

It's an appy world and you're leading the charge. But how secure are your applications?

Web applications with their access, and transactions they process, are prime targets for criminal attackers.

Rapid web application technology changes require organizations to constantly stay abreast of new standards and best practices. With the introduction of each new web technology and the sheer volume of web based attacks, one fact remains true – securing the application(s) is non-negotiable.

QUICK. COMPREHENSIVE. ACCURATE.

WAS Advanced
Powerful and effective, Advanced is conveniently bundled into a rich, affordable, and easy to consume annual subscription that includes:

- Web Application Scanning
- Unlimited users
- Client Advocate support
- 24/7 support
- Access to Active View Dashboard
- User-friendly, aggregated results
- Robust filtering and labeling capabilities

Vulnerability Management Pro
Pro provides the same industry-leading solution subscription as Advanced, but adds a Personal Security Analyst (PSA). PSAs perform the work of running your scans, analyzing the results, generating reports, and providing direct remediation planning guidance for you, as opposed to your security team doing that themselves. It's the ultimate outsource for all size organizations and is especially helpful for organizations that have limited security management time or expertise.
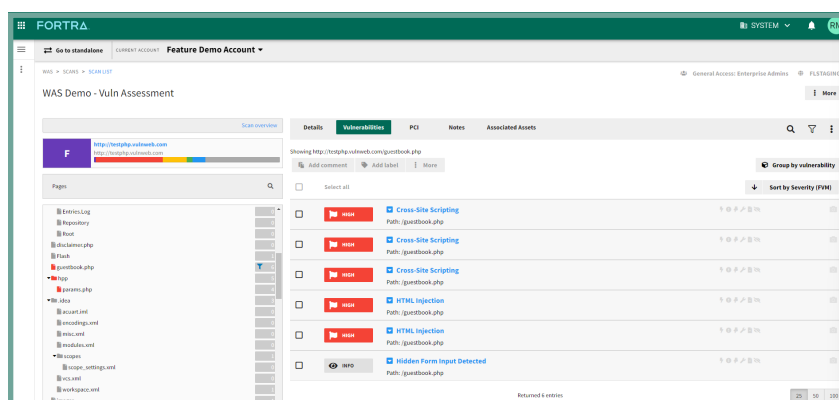

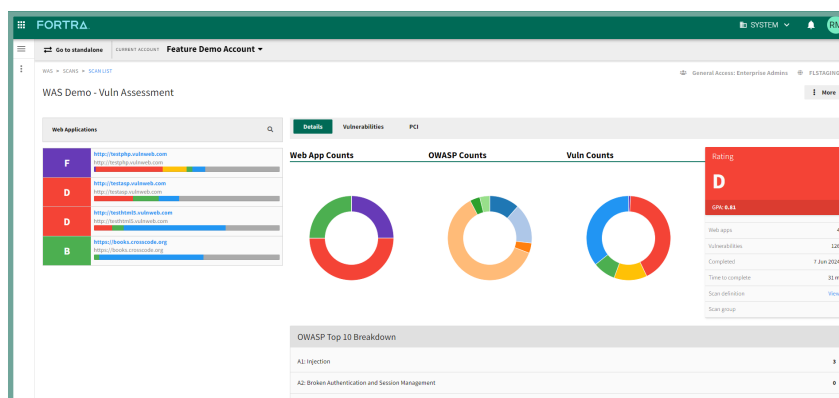

Results Are Key

At Fortra's Digital Defense, we know the importance of optimizing time and resources to ensure your information security program is performing at the highest level.

WAS has been developed to provide the highest level of results through a system that is easily deployed and maintained. Enjoy the benefits of a technology you can trust to deliver unparalleled accuracy with minimal consumption of resources.
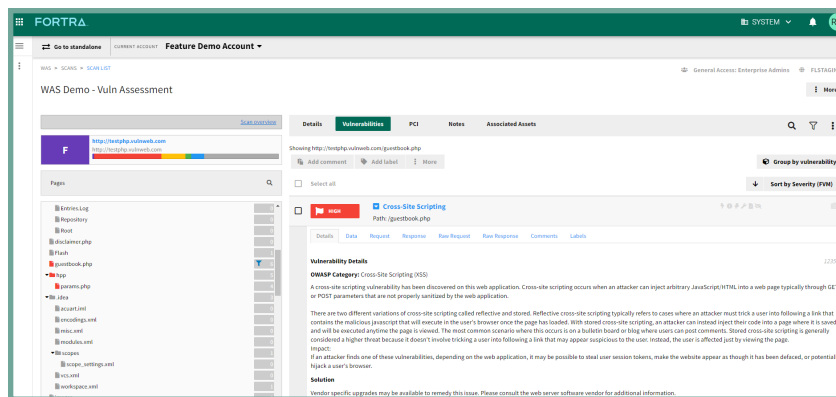

WAS provides:

- High level dashboards at the scan level and a per web application to easily expose overall security postures at various levels

- Tracking of and trending on new, recurred, fixed vulnerabilities

- Security GPA trending that offers a dynamic view of your security posture

- Detailed reporting to address OWASP Top 10

- Ability to compare Fortra VM and WAS Assets Ratings automatically, with no manual intervention required

- ...and more!
