Digital Guardian & Slack Integration

Empower your security teams with data and insights from Slack.

Businesses today face the critical challenge of achieving comprehensive visibility into various communication channels, including chat messages, to effectively mitigate risks associated with internal and external communications. Without proper oversight, organizations are vulnerable to security breaches, data leaks, and compliance violations. In the event of an investigation, having a detailed messaging history is essential for uncovering crucial information and maintaining a robust security posture.

Digital Guardian addresses this need by seamlessly integrating with Slack, offering secure collaboration, and extensive visibility into messages and files. This integration empowers organizations to monitor and control the flow of sensitive information within Slack channels by consistently enforcing data protection policies. By capturing and analyzing chat messages, Digital Guardian enables businesses to detect and respond to potential security threats in near real-time. The solution supports thorough investigations by maintaining an accessible and detailed messaging history, thereby enhancing the organization's ability to uphold compliance and security standards while facilitating safe and efficient teamwork.
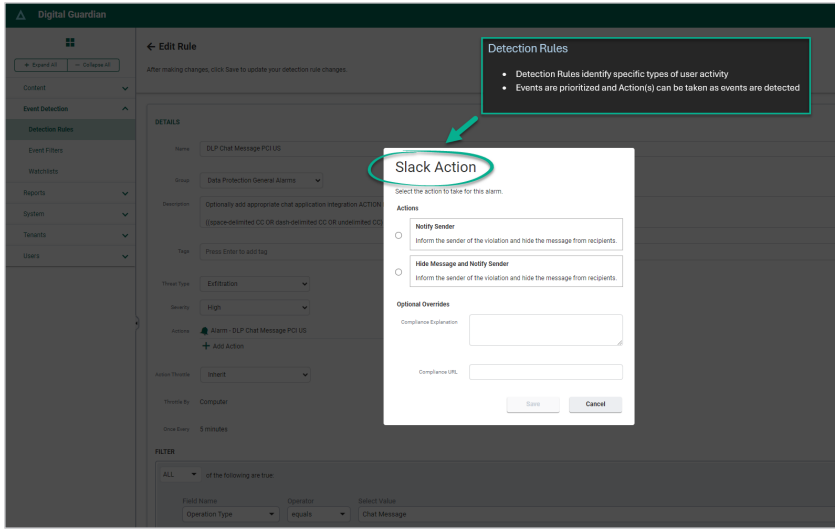

PRODUCT SUMMARY

Key Benefits
Integrating Digital Guardian and Slack ensures secure collaboration and comprehensive visibility, giving organizations the ability to monitor and control the flow of sensitive information, consistently enforcing data protection policies.

Events, Chat History, and Detection Rules

- Chats Message operations become events for data protection analysis

- Chat History provides analysts an interactive message timeline

- Detection Rules identify specific types of user activity

- Events are prioritized and Action(s) can be taken as events are detected

PRODUCT SUMMARY

Incident Investigations and File Uploads

- Chat Message events are available for Investigations, as with any event

- Brief sample shown, not illustrative of full Incident Investigation or Alerts

- Slack file URL links provided

  - Note: file content inspection, and the ability to classify files, is under consideration for future functionality

Automatic Detection and Actions in Slack

- When a policy of the organization is violated, users are promptly notified

- Custom notifications aid in employee education regarding acceptable usage of Slack and company policies
