FORTRA

Email Security Bundles
Complete protection with maximum value

Advanced email threats demand complete protection. This is because inefficiencies in combating phishing result in lost time and productivity for employees and internal SOC teams.

Fortra Email Security makes it easy to deploy interoperable layers of defense that span the entire threat lifecycle from pre-delivery staging to post-delivery via an integrated solution that automates phish reporting, triage, and remediation.

For example, the Report Phish button within Fortra's Security Awareness Training triggers the triage of reported emails by Suspicious Email Analysis, which remediates by continuously purging threats. Then phishing campaigns continue to be monitored and real-world training simulations are put into flight.

More capabilities, with up to 45% less budget

Organisations can save up to 45% while improving their security posture by taking advantage of Fortra's Email Security bundles. Each bundle package tier is available at a single per user price that is significantly more cost-effective than Fortra's individual solutions. So with Fortra's Email Security bundles, you can counter advanced threats while making the most of your cybersecurity budget.

Enforce DMARC
Mitigate Fraudulent Domains

Filter Spam
Detect Malicious Content, URLs, Files & BEC Scams

Automate Clawback
Purge Continuously
Adjust Simulations
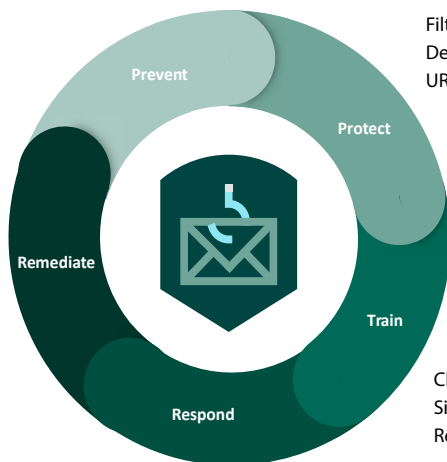

Change Behaviour
Simulate Attacks
Report Potential Threats

Triage Reported Emails
Investigate Threats
Extract Threat Indicators

BUNDLE PACKAGE TIERS*

Core Bundle
Includes **Secure Email Gateway, Security Awareness Training & Suspicious Email Analysis**

- Prevents threats from entering your organisation with Deep Content Inspection
- Removes threats in active content & files, URLs, and metadata via sanitisation
- Extends DLP detection capabilities through sandboxing & Optical Character Recognition
- Minimizes risky user behaviours with Security Awareness Training
- Prepares users for real-world campaigns with Phishing Simulations
- Makes reporting suspicious emails easy with our Integrated Report Phish Button
- Reviews reported emails and automates user feedback with Expert Triage
- Purges threats continuously with Automated, Policy-Based Remediation

Advanced Bundle
Includes everything in the **Core Bundle Package**, plus **Agari DMARC Protection**

- Prevents spoofing using DMARC authentication and enforcement
- Improves email integrity and deliverability by monitoring 3rd-party email senders

Elite Bundle
Includes everything in the **Advanced Bundle Package**, plus **PhishLabs' Domain Monitoring**

- Proactively detects and mitigates lookalike domains "in the wild"

*Bundles available on AWS Marketplace.
