

Industry-Ready MFT: Secure, Govern, and Optimize Data Exchange Across Every Industry

MFT Is Not “One-Size-Fits-All”

Every industry moves sensitive data, but the risks, requirements, and workflows are different, depending on sector needs and requirements.

Why traditional file transfer falls short

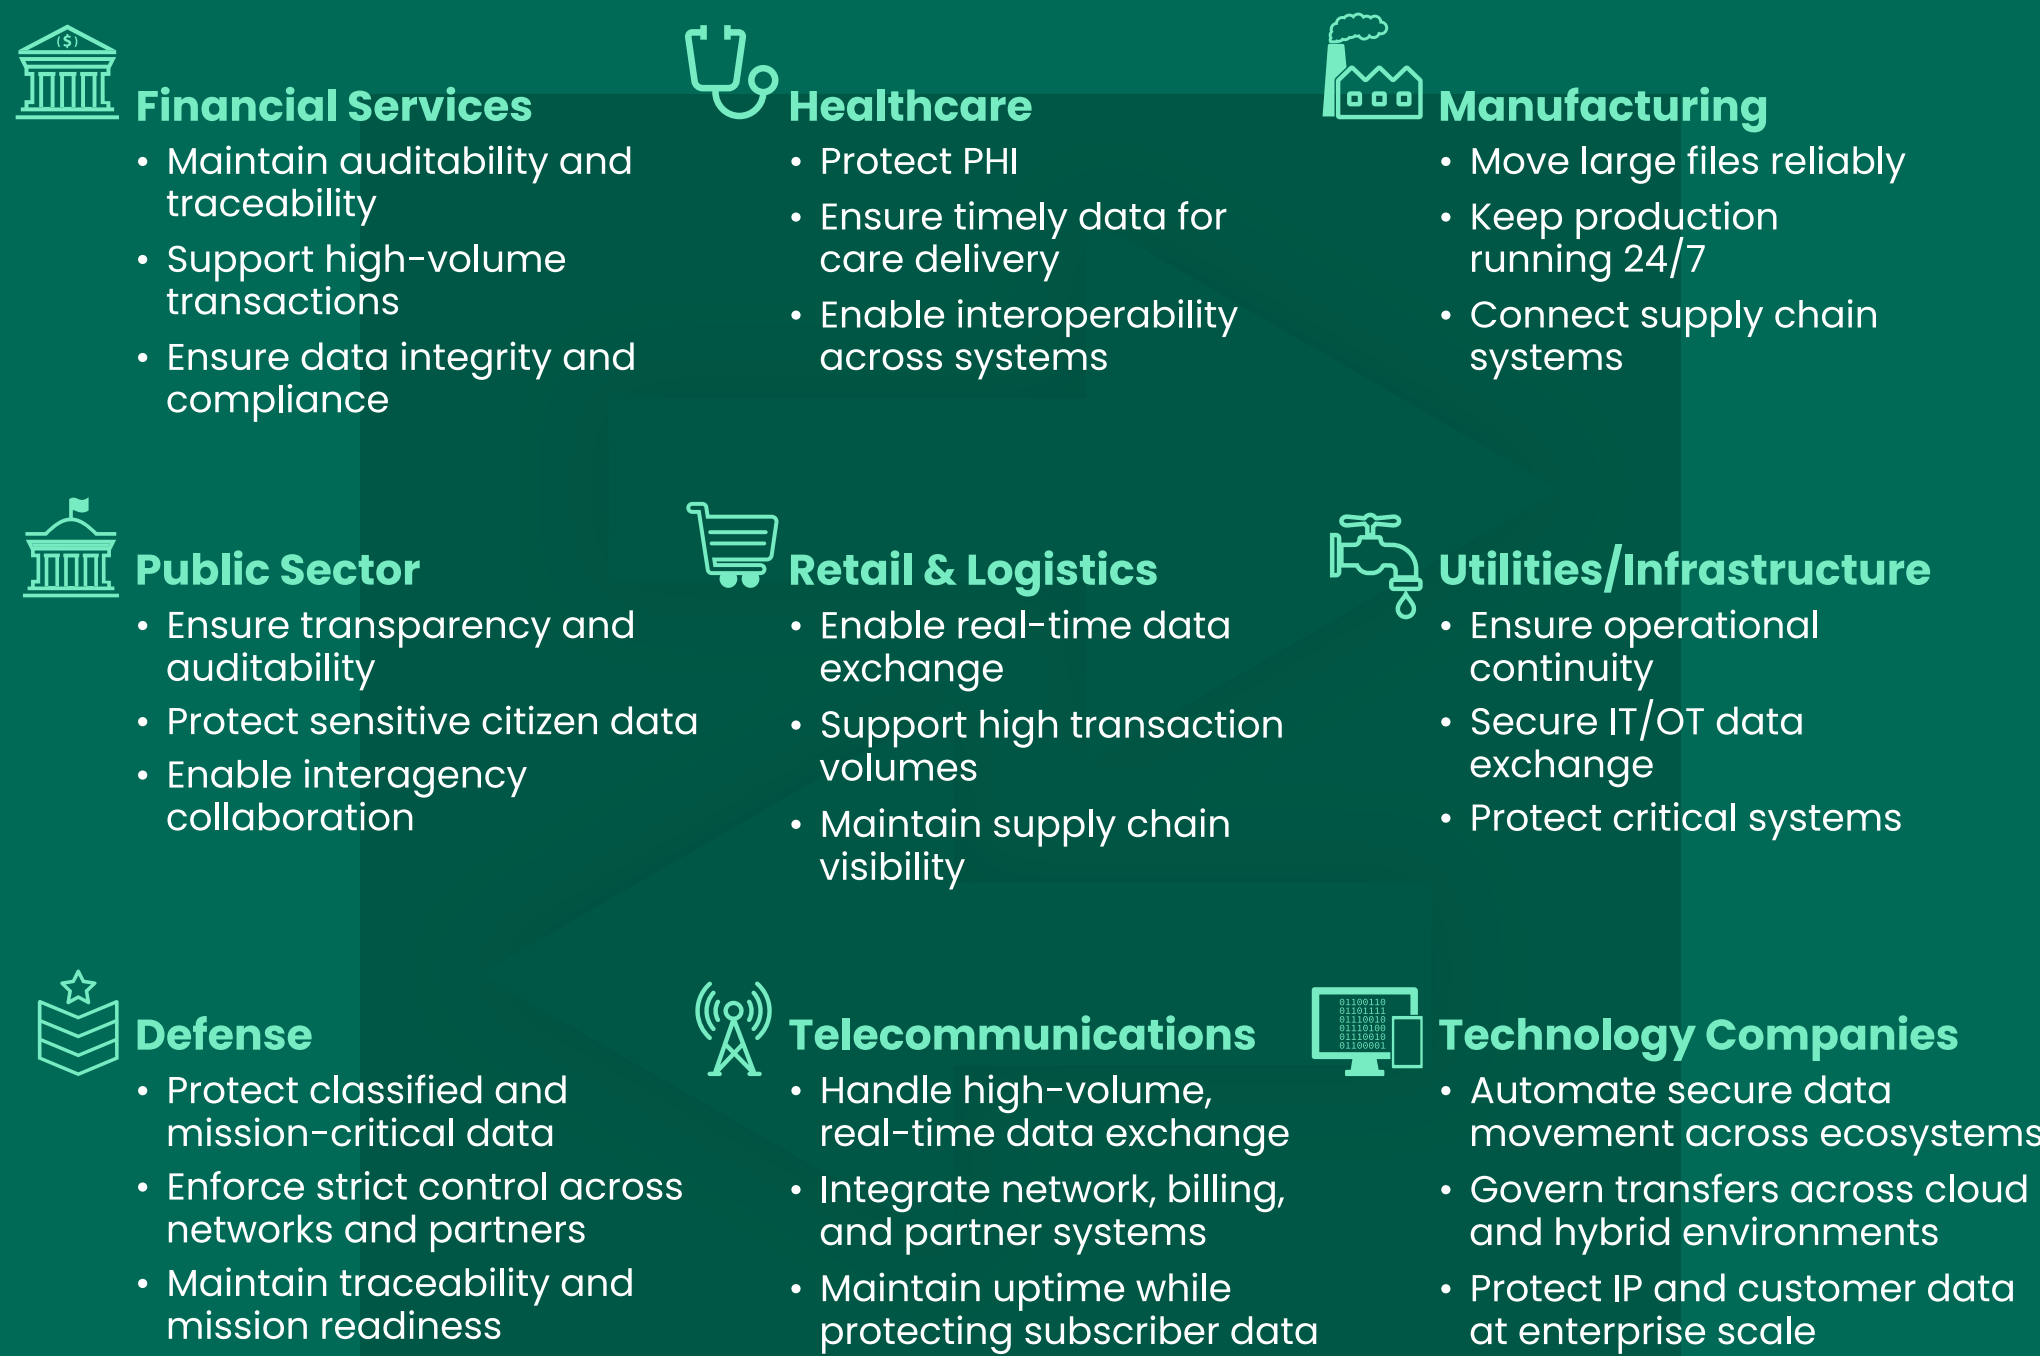

Modern MFT: a better approach to data movement

Modern MFT replaces disconnected processes with a centralized, secure platform that:

Different industries. Different demands.

MFT built for regulatory demands

MFT helps organizations meet various industry requirements by embedding security and governance into every transfer.

HIPAA • PCI DSS • GDPR • SOX • NERC CIP • SOC 2 • NIST

Powered by encryption, access control, and complete audit trails

Without modern MFT, risk builds fast

- Limited visibility
- Manual handling of sensitive data
- Fragmented systems
- Delayed issue detection

Small gaps  Major compliance and operational issues

What industry-ready MFT delivers
