FORTRA MFT
Globalscape

One Organization. Different Security Needs.

Different priorities. A shared foundation for secure file transfer.

From employee records to payment files, every department exchanges sensitive information. Each has different priorities, risks, and workflows. The shared goal: protect sensitive data, keep business moving, and maintain clear accountability.

Different departments. Different priorities.

Human Resources – Protect employee privacy.
Shares: Employee records, payroll, benefits, and recruitment data
At Stake: Employee confidentiality and timely payroll or benefits processing
Key Controls: Access control • Encryption • Audit trails

Finance – Keep financial processes on track.
Shares: Payment files, banking information, invoices, and financial reports
At Stake: Timely payments and continuity of financial operations
Key Controls: Automation • Delivery monitoring • Traceability

Legal – Keep confidential information under control.
Shares: Contracts, regulatory filings, intellectual property, and privileged information
At Stake: Confidentiality and legal obligations
Key Controls: Restricted access • Encryption • Audit trails

Sales – Protect customer information and keep deals moving.
Shares: Proposals, pricing, agreements, and customer information
At Stake: Customer confidentiality and timely commercial exchanges
Key Controls: Access control • Secure delivery • Traceability

Procurement – Keep supplier exchanges secure and on schedule.
Shares: Purchase orders, supplier contracts, banking details, and onboarding files
At Stake: Sensitive supplier information and purchasing timelines
Key Controls: Restricted access • Automation • Audit trails

Operations & Supply Chain – Keep business-critical information moving.
Shares: Manufacturing, inventory, logistics, and distribution data
At Stake: Production schedules, stock availability, and timely shipments
Key Controls: Automation • Reliable delivery • Exception alerts

CROSS-FUNCTIONAL TAKEAWAY

IT & Security – Maintain oversight across every department.
Gain centralized visibility, apply appropriate controls, and maintain records that support audits and investigations.

Different workflows should not mean gaps in protection.

When departments rely on disconnected email, FTP servers, shared folders, scripts, and cloud-sharing tools, consistent protection and oversight become harder to maintain.

Consequences

- **Inconsistent protection** of sensitive information
- **Unclear ownership** when something goes wrong
- **More time spent** investigating issues
- **Limited visibility** into transfer status and failures

A shared foundation. Controls that fit each workflow.

Globalscape EFT helps organizations secure, automate, and monitor file transfers across departments, systems, and external partners.

Apply controls that reflect the sensitivity and business requirements of each exchange, supported by centralized visibility and audit trails.

Departments keep the workflows they need.

IT & Security gain clearer oversight.

Different workflows. Four shared benefits.

Security
Protect sensitive files with encryption, authentication, and access controls suited to each workflow.

Automation
Reduce manual handling and keep recurring transfers and business processes moving.

Visibility
Track transfer activity, **confirm** delivery, and **identify** failures that need attention.

Governance
Define policies, clarify ownership, and maintain records that support audits and investigations.

One organization. Different security needs. Protect sensitive data. Keep business moving. Strengthen oversight.

Discover how a shared MFT approach can address different departmental needs while improving security, visibility, and control across your organization.
