SOLUTION OVERVIEW

One Organization. Different Security Needs.

Secure file transfers across your business with Fortra's Globalscape EFT.

Every department moves sensitive information. Each has different security, compliance, and operational requirements.

Globalscape EFT provides a centralized Managed File Transfer (MFT) platform for securing, automating, monitoring, and governing file exchanges across Human Resources, Finance, Legal, Sales, Procurement, and Operations & Supply Chain.

Support the workflows your business needs while giving IT & Security clearer visibility and control.

The Business Challenge

File transfer processes often develop across a mix of email attachments, FTP servers, shared folders, scripts, cloud-sharing tools, and business applications.

As those processes multiply, organizations can face:

- Inconsistent security and access controls
- Manual handling that creates errors and delays
- Limited visibility into successful and failed transfers
- Unclear workflow ownership and escalation
- Time-consuming audit and investigation requests
- Fragmented oversight of external exchanges

A critical file can affect payroll, payments, purchasing, customer commitments, or production. Securing its movement is part of keeping the business running.

Support Different Departmental Needs

Human Resources

Protect Employee Information
Secure exchanges involving employee records, payroll, benefits, recruitment, and onboarding documentation.

Business need: Keep employee information confidential while supporting timely exchanges with internal teams and external providers.

Globalscape EFT value: Apply access controls, protect file transfers, automate recurring exchanges, and maintain activity records.

Finance

Keep Financial Processes Moving
Secure and automate payment files, banking exchanges, invoices, and financial reports.

Business need: Meet critical deadlines, reduce manual follow-up, and confirm that financial files reached their destinations.

Globalscape EFT value: Automate recurring transfers, monitor delivery, and support traceability and audit requirements.

Legal

Maintain Control of Confidential Exchanges
Protect transfers involving contracts, regulatory filings, intellectual property, and privileged information.

Business need: Restrict access to sensitive files and maintain evidence of transfer activity.

Globalscape EFT value: Support controlled exchanges with internal stakeholders, external counsel, regulators, and other authorized parties.

Sales

Protect Customer and Commercial Information
Secure exchanges involving proposals, pricing, agreements, and customer information.

Business need: Keep sensitive files protected while supporting timely customer and partner interactions.

Globalscape EFT value: Provide secure transfer methods, controlled access, and traceable delivery activity.

Procurement

Strengthen Supplier Exchanges
Manage purchase orders, supplier contracts, banking details, and onboarding files.

Business need: Protect supplier information, reduce manual handling, and keep purchasing-related exchanges on schedule.

Globalscape EFT value: Control supplier access, automate repeatable transfers, and improve visibility into exchange activity.

Operations & Supply Chain

Support Operational Continuity
Automate exchanges involving manufacturing, inventory, logistics, and distribution data.

Business need: Keep business-critical information moving between systems, sites, and operational partners.

Globalscape EFT value: Support reliable automated transfers, delivery monitoring, and notifications when intervention is required.

IT & Security

Gain Enterprise-Wide Oversight
Bring departmental file transfers into a more consistent operational framework.

Business need: Understand how sensitive information moves, manage access, investigate issues, and support governance.

Globalscape EFT value: Centralize file transfer administration, monitoring, and audit records across supported workflows.

One Platform. Four Shared Benefits.

Security

Protect file transfers using encryption, authentication, permissions, and secure protocols including SFTP, FTPS, HTTPS, and AS2, according to deployment and configuration requirements.

Automation

Schedule recurring transfers and automate file-processing workflows to reduce repetitive work and improve consistency.

Visibility

Monitor transfer activity, identify failures, and use auditing and reporting capabilities to investigate issues and confirm what happened.

Governance

Apply consistent controls and maintain records that support accountability, audits, and organizational compliance initiatives.

Start with a Priority Workflow. Build a Broader Approach.

Identify a sensitive or business-critical exchange where manual work, limited visibility, or inconsistent controls create a challenge.

Work with the business owner and IT & Security to define the requirements, evaluate the workflow, and identify an appropriate implementation approach.

As needs evolve, assess additional departments, systems, sites, and external partners that could benefit from the same shared foundation.

Protect Sensitive Data. Keep Business Moving. Strengthen Oversight.

Globalscape EFT helps organizations support different departmental workflows through centralized file transfer security, automation, visibility, and governance.
