Get Straight A's in Cyber Security Awareness

Teach students, faculty, and administrators how to spot crucial cyber threat warning signs and protect confidential data with award-winning security awareness training.

Education institutions are targeted by thousands of cyber attacks every week

All it takes is one ill-advised click on a suspicious link or attachment to leave your most important information vulnerable. If a data breach occurs, your organization could be on the receiving end of serious financial and reputational harm.

Give your employees and students the knowledge they need to detect and report potential attacks with engaging training that changes unsafe online behaviors.

Don't wait until after an attack occurs

Effective cyber security is about more than firewalls and phishing email APIs – it must be part of your organization's cultural fabric. Educate end users on crucial cyber security best practices with restricting productivity or putting confidential information at risk.
