

FORTRA

DATASHEET (Data Classification)

Health Check for Titus Data Classification

Overview

Whether your Titus Data Classification solution has recently been established, or has been in place for many years without change, you will want to assess the current state of the deployed solution and ensure it meets Fortra's best practice guidelines for data protection.

Our Health Checks are designed to evaluate your deployed solution's architecture, policies, and processes to help identify potential gaps and provide recommendations to get up to the data protection standards your organization expects.

Providing an objective report of the current state of the solution provides senior decision-makers actionable intelligence and the opportunity to make informed decisions on direction and change.

The Health Check

The Health Check process is comprised of the three following steps:

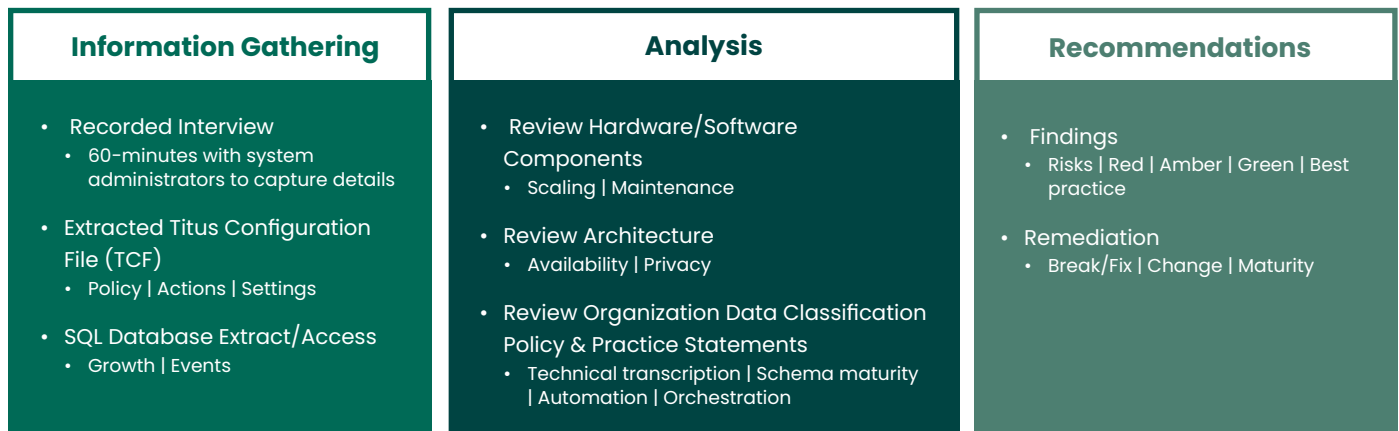

Figure 1 - Simplified three-step process

Deployment and configuration are subject to the requirements of each client; Fortra acknowledges that deviations from best practices are within the scope of governance of each customer environment and subject to additional security measures

Book Your Health Check Today

To learn more about the Health Check, or book yours in today, reach out to us via info@fortra.com and a member of the team will be in touch shortly.
