SOLUTION BRIEF (Titus)

Titus Classification Suite Military Edition Upgrade

Introduction

Most organizations understand the need for effective and secure information sharing, but highly sensitive documents stored and shared in a military environment require data protection capabilities not found in most standard data classification solutions.

Titus Classification Suite for Military allows organizations the most robust classification and policy enforcement solution available today – ensuring that not only is information classified, but the persistent metadata applied by Titus is able to empower and strengthen the rest of an organization's security ecosystem.

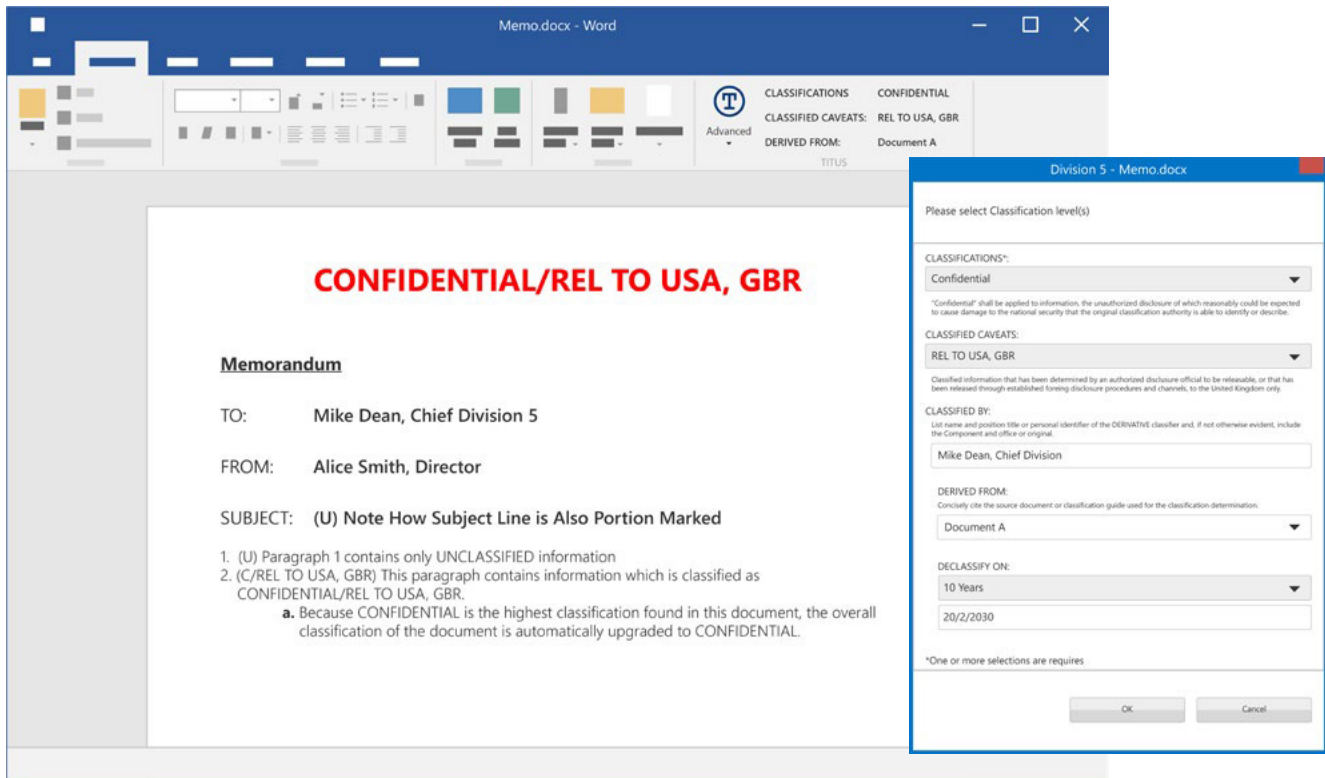

Military Upgrade Features

The following features are included within the Titus Classification Suite for Military above and beyond all features available within the Titus Classification Suite, which remain available to all of our customers.

- **Signed Trusted Labels:** These labels are meant for highly secure environments where tampering with security classifications could have serious implications. Signed trusted labels are implemented using cryptographic features to create a higher level of assurance that labels have not been tampered with. This feature creates a hash of the labels and document content and uses an XML-based digital signature. Compliant with NATO CML labeling standard, this feature is unique to Titus.
- **Portion Marking:** This feature enables authors to apply classifications to individual portions of an email or document, and automatically upgrades the classification to the highest portion marking the email or document. This portion mark can be defined at many levels, including paragraph, table, or image. For example, one paragraph within a document can be classified as SECRET while the rest of the content remains PUBLIC. Portion marks can be configured to appear at the beginning, the end, or beginning and end of the paragraph, table, or image.
- **Unlimited Labels:** Only Titus Classification Suite for Military allows for unlimited classification labels, enabling organizations further customization for business regulation and compliance. Some organizations have hundreds of possible classification labels, and when classification policies change, even organizations with a limited set of labels find it difficult to get users to switch to the new labels. Unlimited labels give organizations the flexibility to meet complex and changing schema and security requirements. Titus is committed to providing our customers with superior service and support. Maximize the return on your investment by renewing your annual support and software maintenance agreement.

SUMMARY

Military and government organizations worldwide trust Titus to ensure their data remains properly protected. Titus Classification Suite for Military offers the most robust feature set available on the market today.

Coming Soon

With the next release of Titus Classification Suite for Military, STANAG 4774 and 4778 compliant label support will be available to customers. This will allow organizations to classify their data based on STANAG classification taxonomy, ultimately elevating the burden of manual classification and the risk of human error within the classification process. This addition to Titus Classification Suite for Military will be available to current customers at no extra cost.
