

Titus Classification for UK Government

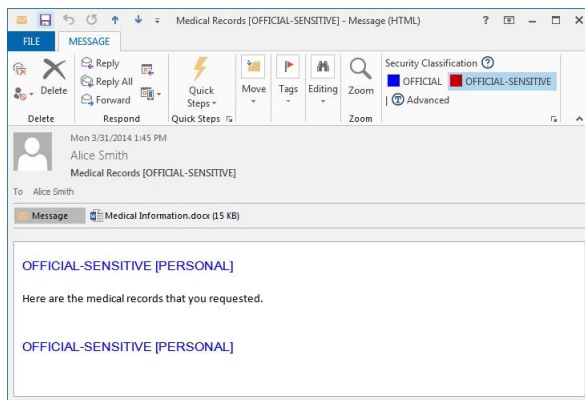

Comply with Government Security Classifications Policy

The UK Government Security Classifications (GSC) policy requires that all UK government organisations classify their information assets into one of three types: OFFICIAL, SECRET and TOP SECRET. This simplified classification scheme replaces the previous Government Protective Marking Scheme (GPMS), making it easier for government staff, contractors and service providers to safeguard government information.

Titus Classification Suite helps UK government organisations comply with the new GSC policy by providing users with an easy way to classify their information assets. In as little as one click, users can apply GSC-compliant classifications and protective markings to email and documents to clearly identify information sensitivity.

As a proven solution that has been deployed to more than 40 UK councils and police forces, Titus Classification provides:

- Full “out-of-the-box” support for the new Government Security Classifications policy
- The ability to customise classifications and markings including special handling instructions
- Recommended product configurations to help ensure legal and regulatory compliance
- Policy enforcement to educate users, reduce the risk of loss, and prevent inappropriate access

Easily apply Government Security Classifications with Titus

Titus Classification™ Suite

Titus Message Classification™ for Microsoft Outlook®

Titus Classification™ for Microsoft Office®

Titus Classification for Desktop™
Titus Mobile™

“Our organisation has been using Titus Message Classification and Classification for Office for a number of years to help us comply with GPMS requirements. When it came time to shift our classification scheme in order to comply with GSC, Titus helped us to make these changes quickly and seamlessly.”

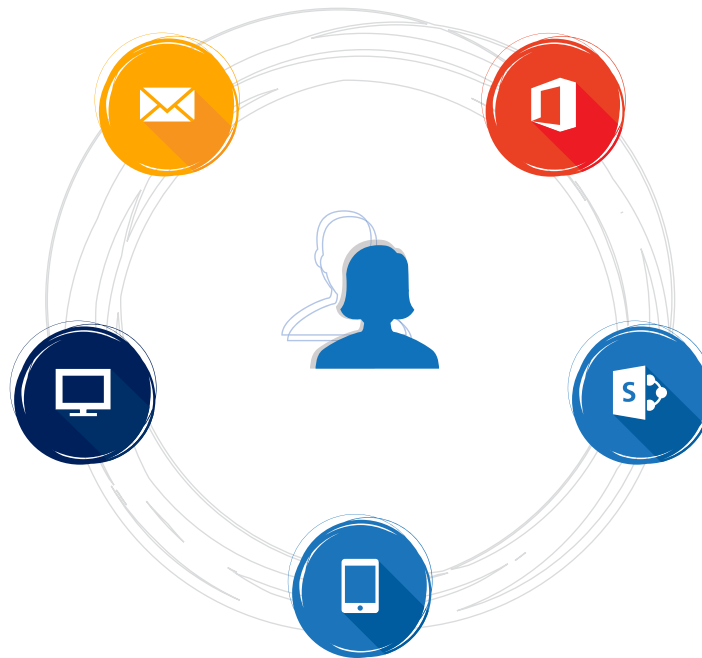

Marc Compton,
Information Security Officer
