

Tripwire, Inc.
Product Support & Discontinuation Policy
February 2023

Product Support & Discontinuation Policy - Tripwire Products, Apps, and Integrations

Support Policy for Tripwire Products

This Policy applies to Tripwire's software products, excluding Tripwire's SaaS platform or cloud capabilities.

Tripwire, Inc. provides "Full Support" for the Current Release (CR) of all its products. Additionally, Tripwire will provide "Limited Support" to the CR -1 release for 12 months after the CR has been made available. Regardless of the number of supported releases, Tripwire will always provide at least "Limited Support" for a release for a period of 24 months from that Release/Version's original release date.

Example for Tripwire Enterprise (TE): Using these four Release/Versions (8.4.1, 8.4, 8.3 and 8.2), the following support policies would change and apply when TE 8.4.1 is released:

- 8.4.1 becomes CR and on "Full Support"
- 8.4 becomes CR -1 and changes to "Limited Support"
- 8.4 (CR -1) support ends 12 months from the release date of 8.4.1 (CR) or 24 months from its own release date, whichever is longer
- 8.3 and older versions have support up to 24 months from their original release dates only
- No Release/Version will be supported longer than 24 months unless it is the CR or CR -1

Exceptions to Support Periods for Tripwire Products

In some cases, Tripwire may choose to extend, modify, or curtail its support of certain products or product versions that do not align with the above stated policy. Modifications or curtailments may be necessitated due to limitations or defects in product or specific product versions. Extensions may be contractually negotiated at the sole discretion of Tripwire.

In the event Tripwire discontinues a product, Tripwire will continue to offer limited technical support for the discontinued products until the earlier of: (a) the expiration date of the support period you purchased, or (b) the date selected as the discontinuation date for the product. Tripwire will continue to provide the same level of technical support you currently enjoy with the following exceptions:

- If a product defect is found and verified, Tripwire Customer Support will document and evaluate the defect.
- Where a workaround for the issue exists, Tripwire will not provide programmatic fixes for the Product. Workarounds that may cause performance issues, scalability issues, or are labor intensive for the customer are considered valid workarounds.
- If the issue requires functional enhancements to the product, Tripwire will not provide further enhancements for the Product. This means that Tripwire will not develop additional features and/or functionalities for the Product.

Additional Information

Additional information regarding the availability and support periods of certain product lines can be obtained from Tripwire Customer Support representatives. To find the contact information for the Tripwire office closest to you, visit the [Contact Tripwire](#) page. Please note that proactive notification email messages and associated documentation are currently provided only in English.

Support Definitions

Common Criteria	The Common Criteria for Information Technology Security Evaluation (abbreviated as Common Criteria or CC) is an international standard (ISO/IEC 15408) for computer security certification. Common Criteria provides assurance that the process of specification, implementation and evaluation of a computer security product has been conducted in a rigorous and standard manner.
CR -1 Release	The latest Release/Version to become generally available (GA) prior to the current release.
CR -2 Release	The latest Release/Version to become generally available prior to the CR -1 release.
Current Release (CR)	The most recently available Release/Version of a Tripwire product is commonly known as the "Current Release."
Customer Center	The Tripwire Customer Center ("TCC") is a self-service support portal and Customer community where the Customer has access to (a) create, update and manage Support requests online, (b) the Tripwire Knowledge Base, (c) the Tripwire Forums, and (d) Support Technical Documentation.
Discontinued	The date when a product is no longer supported or sold by Tripwire. Also known as "End of Life", "Sunset", or "No Support."
Full Support	Full support is provided to Customers based on the terms and conditions of their license agreement. Additional information on Tripwire Customer Support may be found at Tripwire Support Services and Product Discontinuation Policies .
Limited Support	As a product or specific product versions enter the Limited Support phase, the following guidelines apply: <ul style="list-style-type: none"> • Enhancements will not be made to the Release/Version • Tripwire will only develop fixes for problems of high technical or security impact to the Customer. The degree of impact and exposure, and the consequent activities, will be determined jointly by the Customer and Tripwire representatives • Customer Support will direct Customers to the CR for existing fixes/patches and workarounds applicable to the reported issue • Download of CR -1 and CR -2 for support of legacy systems upon Customer request
Product Lifecycle	A Software release moving through "Full Support" to "Limited Support" and finally to the "End of Life" phase.
Release	A new version of the Software made available to Customers.
Release/Version	A Release/Version is a deliverable of a Tripwire product that is fully functional and is installable on the targeted platform through a standard installation program. A Release/Version is referenced using the VV, RR, and MM portions of the release number as described under "Release Numbering."
Release Numbering	Tripwire commonly uses a three-place numbering scheme to designate released versions of software. The format is VV.RR.MM, where VV indicates the version, RR indicates the release level, and MM indicates the maintenance level. An example would be version [3.2.2]. Often in referring to general product versions and releases, the maintenance level is omitted. For example, both [3.2.1] and [3.2.2] may at times be referred to as [3.2] or [3.2.x].
Software Updates	Changes to the Software that improve usability. Generally, an accumulation of maintenance changes to the Software in response to resolutions of Customers' Service Requests (including problems, usability issues, and cosmetic changes) and other Tripwire engineering changes.
Software Upgrades	"Upgrades," as referenced in the Support Policies, refers to new versions of the original Software (identified by a version change to the left of the decimal point, e.g. 8.0 to 9.0) that add functionality and do not extend to other Tripwire product offerings. Upon receipt of a Software update or upgrade, Customer agrees to cease all use of the prior version of the Software and destroy all copies.
Support Agreement	The "Standard Support Policies" govern support services provided to a Customer by Tripwire and may be found at Tripwire Support Services and Product Discontinuation Policies .
Withdrawn Support	Also known as No Support. As a product version enters a Withdrawn Support phase, the following guidelines apply: <ul style="list-style-type: none"> • Enhancements or defect fixes will not be made to the Release/Version • Customer Support will direct Customers to current release for existing fixes/patches and workarounds applicable to the reported issue • For any reported issues that cannot be reproduced by Tripwire, the customer will be directed to upgrade to the current version and verify the issue still exists. • Product versions that are no longer supported will not appear on the individual product pages on the Tripwire Customer Support Web site. • Information for unsupported releases may not be available in our knowledge database. • Information on any available upgrades to new product versions that are supported may be obtained from your Tripwire account representative
