

## SOLUTION BRIEF

# Fortra and AIX

Fortra aligns IT and business goals to help AIX organizations build a competitive edge. Our software is tailored to the unique requirements of the AIX platform, making Fortra a preferred partner for organizations looking to maximize their AIX security, monitoring, and automation projects. Check out our portfolio of solutions below to learn how Fortra can improve your AIX security and systems management.

## Cybersecurity

**Powertech Antivirus** is the only commercially available server-level anti-malware solution for AIX, offering unique protection and scanning to support your AIX infrastructure. Backed by a commercial-grade scan engine, Powertech Antivirus identifies, quarantines, and removes malicious programs from your AIX environment before damage can occur.

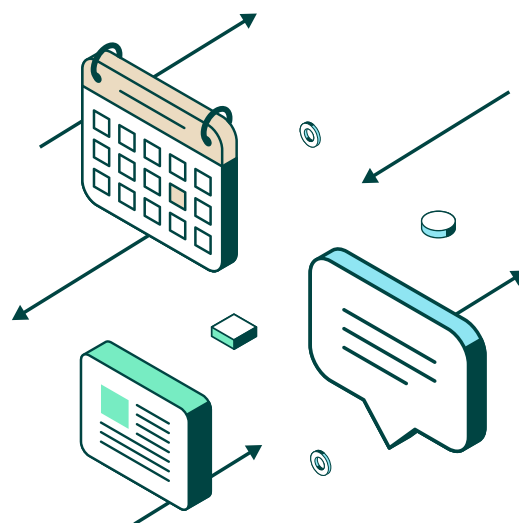

**Tripwire Enterprise®** equips AIX organizations with rigorous integrity management they can trust. Track every suspicious and unauthorized change across your digital environment and resolve unexpected changes back to a trusted and secure baseline using security configuration management (SCM) and file integrity monitoring (FIM). Tripwire is also available as a managed service.

**Fortra VM** is much more than a vulnerability scanner, with a proactive, scalable, and risk-based approach that produces fast, accurate results you can act on instantly. Use threat landscape exploitability context and a customized Security GPA® security posture rating to thwart vulnerability exploitation in your AIX systems. Smart labeling, severity scoring, and a user-friendly interface make it easy to see which vulnerabilities to prioritize.

**Fortra's Secure File Transfer (SFT)** solutions enable AIX organizations to transmit data to customers and partners in a secure and compliant way. With secure protocols, encryption, and identity authentication to protect sensitive data in transmission and at rest, it streamlines the file transfer process for improved ROI while creating the detailed audit logs and reports necessary to prove compliance come audit time.

## AIX SOFTWARE SOLUTIONS

- Vulnerability Management
- Malware Protection
- Secure File Transfer
- File Integrity Monitoring
- Security Configuration Management
- Privileged Access Management
- System Performance Analysis
- Centralized System Management

**Core Privileged Access Manager (BoKS)** transforms your multi-vendor Linux and UNIX server environment into one centrally managed security domain. BoKS simplifies your ability to enforce security policies and features a simple configuration framework for streamlined and robust administration. Easily control access to critical systems and information with straightforward deployment. Systems Management

**Halcyon Network Server Suite** streamlines the monitoring of your AIX and all other network servers, services, and devices. Halcyon Network Server Suite is intuitive and easy to use, allowing you to deliver seamless IT operations and maximum availability across platforms without requiring additional expertise.

**Performance Navigator** allows you to view historical AIX system performance data graphically from your Windows PC. Its robust suite of analysis scripts and reports—known as Power Analytics—helps you ensure that critical performance metrics (including CPU, disk, and memory) are safely within best practice guidelines.
